

Company Presentation

July 2026

Forward-Looking Statements

All statements, except for statements of historical fact, made within regarding activities, events or developments the Company expects, believes or anticipates will or may occur in the future, such as those regarding future well costs, expected asset sales, well productivity, future liquidity and financial resilience, anticipated exports and related financial impact, NGL market supply and demand, future commodity fundamentals and pricing, future capital efficiencies, future shareholder value, emerging plays, capital spending, anticipated drilling and completion activity, acreage prospectivity, expected pipeline utilization and future guidance information, are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. These statements are based on assumptions and estimates that management believes are reasonable based on currently available information; however, management's assumptions and Range's future performance are subject to a wide range of business risks and uncertainties and there is no assurance that these goals and projections can or will be met. Any number of factors could cause actual results to differ materially from those in the forward-looking statements. Further information on risks and uncertainties is available in Range's filings with the Securities and Exchange Commission (SEC), including its most recent Annual Report on Form 10-K. Unless required by law, Range undertakes no obligation to publicly update or revise any forward-looking statements to reflect circumstances or events after the date they are made.

The SEC permits oil and gas companies, in filings made with the SEC, to disclose proved reserves, which are estimates that geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions as well as the option to disclose probable and possible reserves. Range has elected not to disclose its probable and possible reserves in its filings with the SEC. Range uses certain broader terms such as "resource potential," "unrisked resource potential," "unproved resource potential" or "upside" or other descriptions of volumes of resources potentially recoverable through additional drilling or recovery techniques that may include probable and possible reserves as defined by the SEC's guidelines. Range has not attempted to distinguish probable and possible reserves from these broader classifications. The SEC's rules prohibit us from including in filings with the SEC these broader classifications of reserves. These estimates are by their nature more speculative than estimates of proved, probable and possible reserves and accordingly are subject to substantially greater risk of actually being realized. Unproved resource potential refers to Range's internal estimates of hydrocarbon quantities that may be potentially discovered through exploratory drilling or recovered with additional drilling or recovery techniques and have not been reviewed by independent engineers. Unproved resource potential does not constitute reserves within the meaning of the Society of Petroleum Engineer's Petroleum Resource Management System and does not include proved reserves. Area wide unproven resource potential has not been fully risked by Range's management. "EUR", or estimated ultimate recovery, refers to our management's estimates of hydrocarbon quantities that may be recovered from a well completed as a producer in the area. These quantities may not necessarily constitute or represent reserves within the meaning of the Society of Petroleum Engineer's Petroleum Resource Management System or the SEC's oil and natural gas disclosure rules. Actual quantities that may be recovered from Range's interests could differ substantially. Factors affecting ultimate recovery include the scope of Range's drilling program, which will be directly affected by the availability of capital, drilling and production costs, commodity prices, availability of drilling services and equipment, drilling results, lease expirations, transportation constraints, regulatory approvals, field spacing rules, recoveries of gas in place, length of horizontal laterals, actual drilling results, including geological and mechanical factors affecting recovery rates and other factors. Estimates of resource potential may change significantly as development of our resource plays provides additional data.

In addition, our production forecasts and expectations for future periods are dependent upon many assumptions, including estimates of production decline rates from existing wells and the undertaking and outcome of future drilling activity, which may be affected by significant commodity price declines or drilling cost increases. Investors are urged to consider closely the disclosure in our most recent Annual Report on Form 10-K, available from our website at www.rangeresources.com or by written request to 100 Throckmorton Street, Suite 1200, Fort Worth, Texas 76102. You can also obtain this Form 10-K on the SEC's website at www.sec.gov or by calling the SEC at 1-800-SEC-0330.

Range – Who We Are

Pure Play Appalachian Producer with 30+ Years of Core Marcellus Inventory

Durable Free Cash Flow Paired with Efficient Growth

Access to Growing Demand in Domestic and International Markets

Strong Balance Sheet to Deliver Durable Long-Term Capital Returns

Upstream Leader in Environmental Practices

Range – Positioned to Deliver Value Through the Cycles

Unmatched Position in Southwest Appalachia

- 30+ Years of High-Quality Marcellus Inventory to Meet Long-Term Demand Growth

Durable Free Cash Flow with Efficient Growth

- History of Generating Free Cash Flow through Commodity Cycles; ~\$4.4 Billion since 2021
- Expect to Grow Production to 2.6 Bcfe per Day in 2027 at <50% Reinvestment Rate

Peer-Leading Capital Efficiency

- Large Contiguous Acreage Position Supports Efficient Operations and Peer-Leading Well Costs

Diversified Market Outlets

- Access to Growing Demand in Multiple Domestic and International Markets for Natural Gas and NGLs
- Ability to Serve Growing In-Basin Demand

Strong Balance Sheet

- Leverage at 0.6x Debt/EBITDAX

Growing Demand for Reliable, Affordable, Clean Energy

- Supportive Outlook as Natural Gas and NGLs Play a Key Role in Meeting Global Energy Demand Growth
- Maintained Net Zero Scope 1 and 2 GHG Emissions since 2024

Unmatched Core Marcellus Inventory

30+ Years of High-Quality Marcellus Inventory

27 Million Lateral Feet of Undrilled Marcellus at YE 2025
\$/MMbtu Breakeven^(a)

Utica/Point Pleasant and Upper Devonian Further Extend Range's Inventory Life

Notes: Highlighted areas represent townships where Range holds ~2,000 or more acres.

a) PV10 breakeven price per well includes all-in well costs, gathering, processing, transport, pricing differentials, LOE and production taxes. WTI/NGL realization (% of WTI) used for the cases are \$2: \$50/45%, \$2.50: \$60/42.5%, \$3: \$70/40%.

b) Based on maintenance activity levels for 2.6 Bcfe/d.

Global Sales Portfolio

Concentrated Marcellus Assets Access Multiple End-Markets for Natural Gas and NGL Price Diversification

Natural Gas End-Markets

Propane & Butane Exports

Ethane Price Diversification

Durable Free Cash Flow Through the Cycles

History of Sustainable Free Cash Flow and Capital Returns

(a) Cash flow from operations before working capital less capital expenditures.
(b) Cash flow from operations before working capital less capital expenditures. Assumes \$65 WTI and \$24 NGL realizations, 2026 midpoint production and capital expenditure guidance, 2027 production of 2.6 Bcfe/d and capital expenditures of \$675 million, and hedges as of 7/10/26. Assumes effective cash tax rate of 2% in 2026, and 6% in 2027.

Range Multiyear Outlook

Efficient Growth into Increasing Demand

Outlook Through 2027

- Cumulative 2026-2027 FCF of >\$1.7 billion^(a) at \$3.75 NYMEX natural gas and \$24 NGL realizations
- \$650 - \$700 million annual capex
- Grows production to 2.6 Bcfe/d

Growth into Strong End-Markets

- 300 Mmcf/d incremental processing being commissioned
- 250 Mmcf/d incremental natural gas takeaway linked to growing demand in Midwest and Gulf Coast markets
- 20 MBD NGL takeaway and export capacity utilizing new East Coast terminal

Increasing Capital Returns

- <50% reinvestment rate at \$3.75 NYMEX natural gas supports potential shareholder return increases while growing production

Natural Gas and NGL Sensitivity

- Every \$0.25 per mcf change in natural gas realizations is ~\$300 million in cumulative 2026-2027 pre-hedge cash flow
- Every \$1 per barrel change in NGL realizations is ~\$70 million in cumulative 2026-2027 pre-hedge cash flow

Positioned for Capital-Efficient Growth

Differentiated Investments in Inventory Drive Capital-Efficient Growth

RRC Lateral Feet Drilled and TIL

Year-End 2025 DUC Inventory^(a)

Differentiated Inventory Position

- Countercyclical investments built productive capacity while peers maintained or drew down DUCs in 2025
- Range is reducing reinvestment rate in 2026 & 2027, while growing production, which drives increased free cash flow and shareholder returns

RRC Growth Inventory

- Added over 500k lateral feet of growth inventory in 2024 and 2025
- This productive capacity provides capital efficiency tailwinds that drive Range's growth profile through 2027 for similar capital vs. 2025
- Expected annual TILs of ~950k lateral feet in 2026 and 2027

Potential Options Beyond 2027

- Operational efficiencies could allow continued growth into 2028, without changing capital spend in 2026 and 2027. **<\$0.75 per mcf OR**
- Maintain 2028+ production levels of 2.6+ Bcfe per day with ~725k lateral feet of TILs, which is under \$600 million of D&C capital. **<\$0.60 per mcf**

2026 Capital Investments

Operational Plan Supports Efficient Wedge of Production Growth through 2027

(a) 2026 Maintenance Capital for 2.24 Bcfe/d.
(b) Pneumatic Upgrade capital is expected to be completed by year-end 2026.

Compelling Free Cash Flow and Valuation

Range Offers Durable Free Cash Flow and Attractive Trading Multiple and Yield versus Other Sectors

2027 FCF Yield^(a)

Reinvestment Rate (% of Cash Flow)^(b)

2027 EV/EBITDA^(a)

ATAX PV-10^(c) of Proved Reserves per Share, Net of Debt

(a) Bloomberg sector estimates as of 7/17/26. RRC FCF assumes \$65 WTI and \$24 NGL realizations. RRC EV/EBITDA is Bloomberg consensus.

(b) Enverus estimates assuming strip price as of 6/19/26. Reinvestment rate represents estimated capital expenditures / (capital expenditures + free cash flow). Peers include AR, CNX, CRK, EQT, EXE, GPOR.

(c) ATAX PV-10 for \$4/\$5 cases use \$65/\$70 WTI, respectively. Assumes 21% tax rate in all cases, without accounting for expected NOL benefit. Year-end 2025 standardized measure value of \$9.6 billion uses SEC-defined pricing of \$3.39 natural gas/\$65.68 WTI.

Why Invest In Range?

- Large Contiguous Acreage Position Provides 30+ Years of Low-Breakeven, High-Return Marcellus Inventory
- History of Resilient Free Cash Flow Driven by Peer-Leading Well Costs and Decline Rate, Low Capital Intensity, and Liquids Pricing Uplift
- Low Required Reinvestment Supports Significant Free Cash Flow Generation while Growing Production into Increasing Demand
- Access to Growing Demand in Multiple Domestic and International Markets for Natural Gas and NGLs
- All of the Above Position Range to Generate Free Cash Flow through Cycles and Increase Returns to Shareholders as Energy Demand Continues to Grow

Natural Gas & NGL Macro

Natural Gas Plays Key Role in Reducing Emissions

U.S. CO₂ Emissions Reductions Driven by Coal Displacement (MMT)^(a)

- Between 2005 and 2025, total U.S. energy emissions declined ~18%, driven by ~38% decline in emissions from power generation
- EIA attributes ~60% of U.S. power generation emissions reductions to natural gas displacing coal
- Gas can play a similar vital role in global emissions reductions by replacing coal for baseload generation

Coal Consumption & CO₂ Emissions from Energy (2005-2025 Change)^(b)

- Between 2005 and 2025, U.S. energy emissions declined while total global energy emissions increased ~27%
- Despite several IEA calls over the last decade that coal demand would peak, global coal demand hit record highs in 2025, highlighting the need for more natural gas and renewable energy
- China and India energy emission growth more than offset the decrease in U.S. emissions as their coal demand continues to surge

Natural Gas Supporting Electrification and Coal Displacement

Growing Market Share in U.S. Power Generation

- Gas power demand grew by 15 Bcf/d from 2010-2025, while coal declined 21 Bcf/d^(c) and renewables grew 12 Bcf/d^(c)
- Natural gas has grown to 41% of the U.S. generation mix

Market Share Growth Should Continue

- Approximately 14 Bcf/d of coal generation remains to be displaced, or ~17% of U.S. Power Generation Mix
- 110 GW of coal plant capacity retired from 2013-2025, and another 30 GW of coal plant retirements have been announced for 2026-2030
- Increased electrification, industrial reshoring, EV growth, and data centers to boost power demand. Modest new nuclear and challenged renewable returns in some regions require natural gas to fill the supply gap.
- New gas-fired reciprocating engines being added to balance grid instability issues created by renewables

Global Power Generation Opportunity

- Coal generation remains ~33% of global power generation, or ~206 Bcf/d^(c)
- Electrification of global economies and global AI data centers will increase power demand, a significant portion of which will be supplied by natural gas
- China and India are increasing natural gas use in efforts to reduce emissions intensity
- Coal generation remains ~54% of China's power generation mix (~113 Bcf/d^(c)) and ~71% of India's power generation mix (~29 Bcf/d^(c))

U.S. Power Generation by Source^(a)

Significant Global Coal Displacement Potential Remains^(b)

U.S. LNG Plays A Vital Role in Global Energy Security

Global LNG Exports (Bcf/d)^(a)

- The U.S. became the world's largest LNG exporter in 2023
- U.S. LNG exports have grown from ~0 Bcf/d in 2015 to >18 Bcf/d in 2026
- LNG export projects create strong economic benefits for local communities via jobs, taxes and royalties
- Disruptions in Qatar further strengthen demand for U.S. LNG
- U.S. has abundant gas resources to support future growth at higher prices

European Gas Supply by Source (Bcf/d)^(b)

- U.S. has stepped up to replace Russian pipeline gas into Europe, while other sources were flat to down since 2021
- U.S. LNG has played a vital role in energy security for our allies
- U.S. LNG can accelerate decarbonization through coal-to-gas switching in the power sector and provide backup to intermittent renewable power

Future Natural Gas Fundamentals Are Strong

Natural Gas Plays Key Role in Meeting Growing Global Energy Demand

- Demand grows ~25 Bcf/d by 2030, driven by increased exports, electric power and industrial demand
- Upside to electric power demand from electrification and AI data center load growth
 - Outlook includes ~5 Bcf/d of electric power demand growth related to AI data center load growth
- LNG export demand projected to increase ~16 Bcf/d from average 2025 levels to ~32 Bcf/d in 2030
- Outlook assumes associated gas growth of ~10 Bcf/d
- Even if oil basin activity increases with rising oil prices, significant growth is still needed from gassy basins to meet future demand
- Additional infrastructure is needed for supply to meet demand

Significant Natural Gas Demand Growth Through 2030

2026-2030 Demand Outlook

- Total demand growth of +25 Bcf/d through 2030 from LNG and pipeline exports to Mexico, industrial and electric power demand growth
- Current LNG feedgas capacity ~20 Bcf/d as of July 2026
- LNG projects under construction add ~18 Bcf/d through 2030
- Continued coal (currently ~17% of power stack) retirements and site repurposing present upside to this demand outlook
- Reshoring of industrial demand and investments in domestic supply chains, and accelerating AI data center power demand growth present upside to industrial gas and electric power demand forecasts

U.S. LNG Export Demand Outlook

- Range forecasts U.S. LNG feedgas capacity to reach >35 Bcf/d by 2030, and continue to grow in the 2030s
- Next-wave U.S. LNG projects of ~18 Bcf/d currently under construction expected to come online through 2030
- Additional ~1-2 Bcf/d could FID in 2026
- LNG vessels on order for delivery through 2031 represent a ~35% increase to the current global fleet to meet anticipated global demand

U.S. Gas Demand Growth Outlook (Bcf/d)

U.S. LNG Export Terminal Capacity Under Construction or In-Service (Bcf/d)

Growing Power Demand Highlights Critical Role of Natural Gas

Strong Northeast Gas Demand Growth Potential

- PJM forecasts a ~25 GW increase in summer load demand for 2026-2030, and raised its 2026-2035 growth forecast to ~57 GW
- Assuming natural gas takes a ~50% share of PJM generation growth results in 2.1 Bcf/d of natural gas demand growth by 2030 and 4.8 Bcf/d by 2035
- Data centers, battery & chip plants, and reshoring are boosting PJM's load forecast
- 30 GW of coal plants at risk of retiring in PJM by 2030 (~2 Bcf/d^(a))
- Neighboring regions (Southeast/Midwest) accessible by pipelines from Appalachia to exhibit similar gas demand trends

Significant Natural Gas Demand Forecast from Data Centers

- Various third-party research estimates indicate an average ~5 Bcf/d of incremental natural gas demand from AI data centers by 2030
- Appalachia well-positioned to meet incremental data center demand
 - Announced Homer City Redevelopment, Shippingport Industrial Park, and Monarch Compute Campus expected to add ~1.8 Bcf/d of natural gas demand in Appalachia, with initial power generation startup projected by 2027
 - Potential NextEra gas generation hub in southwest PA and SB Energy data center site in OH could add >2 Bcf/d of natural gas demand
 - Range strategic collaboration with Liberty Energy and Imperial Land to supply natural gas to proposed state-of-the-art power generation facility in Washington County, PA

PJM Projections of Future Load Growth (MW)^(b)

Natural Gas Demand from Data Centers^(c)

Appalachia Demand Fundamentals Improving

~5-11 Bcf/d of Demand Growth and Additional Takeaway Capacity Through 2030

Data Centers

- High Case only includes ~4 Bcf/d of risked pre/post FID Northeast data center projects^(a)
- Project proposals in Appalachia have a target capacity of ~9 Bcf/d, providing further demand potential beyond 2030^(b)

Industrial Demand Growth

- ~\$90 billion of deals announced at Pennsylvania Energy and Innovation Summit to support AI and energy infrastructure in the state
- Large semiconductor projects add ~0.1 Bcf/d of demand each; Intel (OH), Micron (NY)
- Battery and solar manufacturing plants (OH)

Takeaway

- Expansions including Transco SE Supply Enhancement and MVP Southgate potentially add ~2.2 Bcf/d by 2030
- Multiple other pipeline projects under consideration provide further takeaway growth potential

Coal Retirements

- ~0.3-1.8 Bcf/d by 2030; 2.3 GW of Northeast coal plant retirements announced through 2030

Lower 48 Dry Gas Production

Future U.S. Supply Growth Expected to be Limited by Infrastructure Constraints and Productivity Declines

Lower 48 Storage – Days of Supply

U.S. Natural Gas Days of Supply Are Below Average

NGL Macro Strengthens with International Demand Growth

Increasing Global Demand Being Supplied by U.S. LPG

- Global ResCom consumption growth and chemical projects add ~1.0 MMBD of LPG demand through 2030 with the majority supplied by the U.S.
- Middle East LPG export terminal damage and ongoing Strait of Hormuz closure has cut off >1 MMBD of global LPG supply, increasing demand for U.S. LPG exports
- U.S. LPG export terminal expansion projects will add ~950 MBD of nameplate capacity by 2029 to support expected call on U.S. supply
- Reduced naphtha exports from Russia and the Middle East are generating demand for replacement NGL feedstocks

U.S. Exports Efficiently Meet Global LPG Demand

Global LPG Supply and Demand Markets Shift

- U.S. share of global LPG exports has risen to 56% in 2026
- U.S. LPG exports increased 475 MBD, or 20%, in 2Q26 vs. 2025
- Reduced OPEC LPG exports to Asia increase demand for U.S. supply

U.S. LPG Export Expansions Will Supply Global Demand

- Terminals expected to remain full in 2026 as Middle East LPG exporters struggle to restart business as usual
- U.S. LPG export capacity to grow ~950 MBD, or 36% by 2029
- High terminal utilization reinforces tighter U.S. LPG fundamentals, supporting Mont Belvieu prices and premiums at U.S. docks

U.S. LPG Supply Shifts to Unfulfilled OPEC Buyers

Growing U.S. LPG Market Share with Rising Exports

U.S. LPG Export Terminal Buildout

Global Naphtha Cracking Rationalization Supports U.S. NGL Demand

Global Ethylene Production

- Although ethylene demand has grown by 8.5% since 2021, the global overbuild of ethylene production capacity has suppressed operating rates
- Asia and Europe are rationalizing older, less efficient naphtha-fed ethylene steam crackers
- Ethane and LPG fed crackers fill the void left by shuttered naphtha crackers. Naphtha crackers yield up to 20% propylene, and any lost naphtha-based propylene supply will shift to PDH units, benefiting PDH operating rates
- Global ethylene demand forecasted to grow ~+9.5% by 2028
- Ethane & LPG-fed ethylene steam crackers are historically the lowest cash cost in the world, supporting continued demand for U.S. supply

Ethane & LPG Supply Needed to Backfill Displaced Feedstock Demand

Announced Naphtha-Fed Ethylene Production Closures

Low Cash Cost U.S. NGLs Preferred Over Alternative Feedstocks

New Flex Terminal Capacity Supports Tighter Propane Fundamentals

Propane Export Capacity

- Neches River Phase 2 terminal has "flex" export capacity of ~180 MBD C2 / 360 MBD C3
- Neches River Phase 2 is expected to be fully utilized exporting propane, bolstering U.S. nameplate LPG terminal capacity by ~+14%
- U.S. propane exports averaged ~2.1 MBD in May-June, +13% higher year-on-year, supported by the new capacity
- The majority of this new flex capacity is contracted to ethane buyers beginning in 2027, however additional LPG export capacity expected to come online early in 2027 keeps LPG export capacity levels constant

Propane Stocks Building at Historically Low Rates in 2026

Incremental Exports Tighten Days of Supply Outlook

- Neches River Phase 2 operating at 90% capacity for the remainder of 2026 generates ~60 MMB of additional demand and deteriorates stock surplus to the 5-year average
- New Houston Ship Channel terminal adds ~300 MBD of terminal capacity in December of 2026 and the Repauno terminal adds 60 MBD of propane export capacity in 1Q27, supporting sustained LPG export growth
- Days of supply tightness to the 5-year average supports uplift in domestic prices towards the second half of 2026

Robust Propane Exports Tighten Days of Supply Forecast

Global Ethylene Demand Growth Drives U.S. Ethane Exports

Global Ethane Demand

- Demand growth for packaging, automobiles, and electronics requires additional ethylene production
- Ethylene steam cracking capacity is expected to increase by ~750 MBD by 2030, requiring additional ethane supply
- Steam cracker demand capacity outside the U.S. and Canada accounts for ~500 MBD, or ~67% of new global projects. Since ethane-fed ethylene crackers are at the low end of the cost curve, they will benefit from higher operating rates compared to the rest of the ethylene fleet.

Global Ethane Demand Creates Significant Call on U.S. Supply

U.S. Export Growth Needed to Meet Global Demand Growth

- Currently planned U.S. ethane export terminal expansion projects will add ~440 MBD of additional capacity, falling short of the call on U.S. supply
- VLEC fleet adding 47 newbuilds, or ~695 MBD in 2026-2027 to support U.S. terminal expansion projects
- Further U.S. ethane export terminal expansions will be required to satisfy remaining international demand growth
- New U.S. ethane export capacity will alleviate bottlenecks and support further growth projects

U.S. Supplies 100% of Global Waterborne Ethane Supply

An aerial photograph showing a natural gas processing facility situated in a lush, green landscape. The facility includes several large white storage tanks, green industrial structures, and a paved area with equipment. The site is surrounded by dense forests and rolling hills under a bright blue sky with scattered white clouds.

ESG

Leading in Environmental Practices

Industry-Leading Emissions Targets

- Maintained **Net Zero** for Scope 1 and 2 GHG emissions through direct emissions reductions and verified carbon credits
- Range maintained an “A” grade from MiQ following the 2026 certification of its Pennsylvania assets

Comprehensive Emissions Management Framework

- LDAR survey frequency of 8x per year on 100% of our assets
- Continuous methane and ambient air monitoring programs to enhance emissions detection, facility designs and operational transparency
- Low end of methane emissions intensity compared to peers

Commitment to Clean & Efficient Operations

- Recycled ~100% of produced water generated from our operations for more than a decade
- 49% of total water used for operations in 2025 was reuse water
- Water recycling lowers completion costs and LOE

Lowest Methane Intensity Compared to Peers^(a)

Top-Tier Emissions Management Program

Governance & Social Responsibility

Range Is Committed to Strong Governance and Social Responsibility.
Range Views These Objectives as Core to Delivering Long-Term Value for Shareholders.

Board Governance

- ✓ Average Director tenure of five years
 - ❖ Chris Kendall appointed to the Board in February 2025
 - ❖ Charles Griffie appointed to the Board in October 2023
- ✓ Range seeks to achieve a diverse combination of knowledge, experience and skills
- ✓ 33% of independent directors are women
- ✓ 50% of committees chaired by women
- ✓ Independent Chairperson
- ✓ Actively engage directly with shareholders
- ✓ Formed ESG & Safety Committee with all independent directors currently serving

Director Independence

All directors are independent except the CEO

Social Responsibility

Safety Leadership

- ✓ Zero severe injuries in 2025
- ✓ 62% reduction in Contractor and Range employee Days Away, Restricted, or Transferred since 2023 (DART)
- ✓ Safe Driving Campaign to focus on awareness, training, and equipment
- ✓ Five recordable Range employee incidents in 3.6 million work hours since 2023

Community Stewardship

- ✓ Over \$5 billion paid to impact fees, royalty and lease payments, and charitable contributions through 2025
- ✓ Volunteered 3,600+ employee hours in 2025
- ✓ Named to Newsweek Magazine's 2025 Most Responsible Companies list
- ✓ Recognized as one of JUST Capital's Most JUST Companies
- ✓ Awarded 2026 Pittsburgh Excellence in Ethics Award

Executive Compensation Aligned with Shareholders

Changes to Incentive Plans Have Been Informed by the Board's Direct Outreach to Stakeholders, Annual Shareholder Outreach to Greater than 65% of Shares Outstanding

Long-Term Equity Incentive Plan	Annual Incentive Targets
Long-term incentives focused on absolute and relative shareholder returns. ✓ 60% Performance-Based & 40% Time-Based RSU ✓ Greater than 85% of CEO compensation at-risk ✓ Relative TSR component with absolute performance modifier ✓ S&P 400 and S&P Oil & Gas E&P as peers to capture performance relative to the broader market ✓ Additional weighting placed on performance relative to natural gas peers ✓ Restricted stock subject to 3-year cliff vesting	Short-term incentives focused on key financial and ESG framework targets, prioritizing returns, cost efficiencies and environmental, health & safety measures. ✓ Free Cash Flow to promote resilience through commodity price cycles ✓ Returns metrics focus on consistent value creation ▪ Return on Capital ✓ EHS component relies heavily on quantitative assessments including: ▪ TRIR for employees and contractors ▪ Preventable vehicle incidents ▪ Spills and leak rates ▪ Notices of violations ✓ Cash Unit Costs ✓ Drilling & Completion Cost per Mcfe

Appendix

Appalachia – Stacked Pay

Gas in Place Analysis Shows the Greatest Potential is in Southwest Pennsylvania

- ~1.5 million net effective acres^(a) in PA provides decades of drilling inventory
- Activity led by Core Marcellus development in Southwest PA
- ~1,600 producing Marcellus wells demonstrate consistent, high quality results across Range's position
- ~400,000 net acres in SW PA prospective for Utica / Point Pleasant
- Range's third dry gas Utica/Point Pleasant well (2016) one of the best in the basin

**Stacked Pay and Existing Pads
Allow for Multiple Development
Opportunities**

**Upper
Devonian**

Marcellus

**Utica/Point
Pleasant**

Multi-Decade Inventory of Capital Efficient Wells

Range Has Delineated Its Entire Acreage Position

- Since pioneering the Marcellus in 2004, Range has drilled across its Appalachian position
- ~1,600 producing wells in PA provide control data for new development activity
- **Contiguous acreage provides for operational efficiencies and industry leading well costs:**
 - Long-lateral development
 - Efficient water handling and sourcing
 - Optimization of electric fracturing fleet and existing infrastructure

Track Record of Returning to Existing Pads

- Network of over 250 existing pads with an average of 6 producing wells versus capacity designed for an average of 20 wells
- Drives savings through use of existing surface infrastructure
- Over 50% of 2026 activity on existing pads, similar to recent years
- Well results after several years from returning to existing pads show no degradation in recoveries

>30 Years^(a) of High-Quality Marcellus Inventory that Breaks Even Below \$2.50

Northeast Pennsylvania

- Approximately 70,000 net acres prospective for Marcellus development
- 2025 Northeast PA production averaged over 100 Mmcf per day
- Utilizing existing infrastructure to bolster efficiencies and returns

**Range's Northeast Marcellus Assets
Provide Additional
Dry Gas Marcellus Inventory**

Northwest Pennsylvania – Utica/Point Pleasant

- Range has approximately 220,000 net acres with Utica/Point Pleasant potential
- ~190,000 net acres have similar thermal maturity and liquids potential as EOG's liquids play in Ohio
- The play on Range's acreage is at a similar depth and pressure regime as EOG's activity in Ohio
- Retained deep rights from divested properties. Acreage is held by production.

Range's Northwest Utica/Point Pleasant Assets Provides Potential Liquids Opportunity

Marcellus Modeling Data

Previous Wet and Super-Rich Area type curves combined into a single Liquids Rich Area as an increasing number of long laterals are extending across both areas. Dry Gas Areas type curve expanded to include Northeast Pennsylvania.

Liquids Rich Area

- ~350,000 Net Acres
- EUR / 1,000 ft. = 3.2 Bcfe
- 2026 D&C Cost / ft. = \$850

Dry Gas Areas

- ~170,000 Net Acres
- EUR / 1,000 ft. = 2.2 Bcfe
- 2026 D&C Cost / ft. = \$830

Gross Estimated Cumulative Recoveries by Year

NGL Price Calculation Example

% of RRC Barrel	Mont Belvieu (\$/gal)	Avg. 2024	Avg. 2025	1Q 2026	2Q 2026	3Q 2026E	4Q 2026E	Avg. 2026E
53%	Ethane	\$0.19	\$0.25	\$0.23	\$0.21	\$0.22	\$0.23	\$0.23
27%	Propane	\$0.78	\$0.75	\$0.66	\$0.78	\$0.74	\$0.77	\$0.74
8%	Normal Butane	\$1.01	\$0.91	\$0.88	\$1.08	\$1.03	\$1.05	\$1.01
4%	Isobutane	\$1.15	\$0.95	\$0.89	\$1.12	\$1.09	\$1.06	\$1.04
8%	Natural Gasoline	\$1.51	\$1.35	\$1.50	\$1.94	\$1.78	\$1.68	\$1.72
Range-Equivalent Mont Belvieu Barrel (\$/gal)		\$0.56	\$0.55	\$0.53	\$0.61	\$0.59	\$0.59	\$0.58
Range-Equivalent Mont Belvieu Barrel (\$/bbl)		\$23.44	\$23.28	\$22.21	\$25.61	~\$24.75	~\$24.75	~\$24.25
Range's NGL Differential (\$/bbl)		\$2.33	\$0.87	\$4.41	\$3.49	~\$0.00-\$1.00	~\$0.00-\$1.00	\$2.00-\$2.50
Range's Pre-Hedge Realization (\$/bbl)		\$25.77	\$24.15	\$26.62	\$29.10	~\$24.75-\$25.75	~\$24.75-\$25.75	~\$26.25-\$26.75

Additional Considerations

- Range NGL differential can be influenced by factors including:
 - Naphtha vs. ethane prices
 - International prices vs. Mont Belvieu
 - Timing of LPG cargoes
 - Barrel mix
 - Ethane recovery
 - Natural gas prices vs. ethane

2026 Guidance Improved to a Premium of \$2.00 to \$2.50 above the Mont Belvieu Equivalent

Range 2026 Guidance

	Updated 2026 Guidance	Prior 2026 Guidance - April
Production per Day	2.35 - 2.40 Bcfe	2.35 - 2.40 Bcfe
Capital Expenditures	\$650-\$700 Million	\$650-\$700 Million
Maintenance Drilling & Completion	\$500 Million	\$500 Million
Growth Drilling & Completion	\$120 - \$140 Million	\$120 - \$140 Million
Maintenance Land	\$10 - \$20 Million	\$10 - \$20 Million
Targeted Acreage to Increase Future Inventory	\$5 - \$15 Million	\$5 - \$15 Million
Pneumatic Devices, Facilities and Software	\$15 - \$25 Million	\$15 - \$25 Million
Cash Expense Guidance		
Direct Operating Expense per mcfe	\$0.12 - \$0.13	\$0.12 - \$0.13
TGP&C Expense per mcfe	\$1.55 - \$1.60	\$1.55 - \$1.60
Taxes Other than Income per mcfe	\$0.03 - \$0.04	\$0.03 - \$0.04
G&A Expense per mcfe	\$0.17 - \$0.18	\$0.17 - \$0.18
Exploration Expense	\$22 - \$28 Million	\$22 - \$28 Million
Net Interest Expense per mcfe	\$0.07 - \$0.09	\$0.07 - \$0.09
DD&A Expense per mcfe	\$0.45 - \$0.46	\$0.45 - \$0.46
Net Brokered Marketing Expense	\$8 - \$12 Million	\$8 - \$12 Million
Pricing Guidance		
Natural Gas Differential to NYMEX	(\$0.35) - (\$0.40)	(\$0.35) - (\$0.45)
Natural Gas Liquids ^(a)	+\$2.00 to +\$2.50 per barrel	+\$1.25 to +\$2.50 per barrel
Oil/Condensate Differential to WTI	(\$10.00) - (\$12.00)	(\$10.00) - (\$14.00)

Hedge Summary

Range’s Hedging Strategy, Marketing Contracts, and Diversified Production Mix Support Consistent Operational Plans and Shareholder Returns Through the Cycles.

2H 2026 Hedging

	Avg. Floor	Avg. Ceiling
Natural Gas	\$3.87	\$4.58
Oil	\$65.00	\$77.63

2027 Hedging

	Avg. Floor	Avg. Ceiling
Natural Gas	\$4.04	\$4.21
Oil	-	-

2028 Hedging

	Avg. Floor	Avg. Ceiling
Natural Gas	\$3.50	\$4.50
Oil	-	-

Resilient Balance Sheet

Strong Balance Sheet Provides Flexibility Through the Cycles and Lower Debt Improves Cost Structure
